

SEAN C. LEWIS

Ph.D. Candidate ◊ Department of Physics ◊ Drexel University
Philadelphia, PA 19104, USA
sean.phys@gmail.com

RESEARCH INTERESTS

Computational astrophysics, including the formation and evolution of star clusters, the impact of massive stars and stellar feedback, and software development for converting astrophysical simulation data sets to be accessible by different codebases.

EDUCATION

| | |
|------------------------------------------------|----------------|
| Drexel University | |
| Ph.D. Student/Candidate of Physics | 2017 – Present |
| M.S. in Physics | 2019 |
| California Polytechnic State University | |
| B.S. in Physics | 2016 |
| <i>Cum Laude</i> | |

POSITIONS HELD

| | |
|------------------------------------------------|----------------|
| Drexel University | 2017 – Present |
| <i>Teaching Fellow; Research Fellow</i> | |
| Department of Physics | |
| California Polytechnic State University | 2015 – 2016 |
| <i>Research Assistant</i> | |
| Department of Physics | |

AWARDS AND HONORS

| | |
|------------------------------------------------------------------------------------------|-----------|
| <i>Chambliss Astronomy Achievement Honorable Mention</i> , American Astronomical Society | 2020 |
| <i>Department of Physics Teaching Excellence Award</i> , Drexel University | 2019 |
| <i>CoAS Dean Honors List</i> , California Polytechnic State University | 2012–2016 |

RESEARCH HISTORY

| | |
|--------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2021–Present | Hydrodynamical Simulation Data Structure Conversion Developed a novel software technique for transferring simulation data from a Voronoi mesh data structure to a block-based adaptively refined grid structure utilizing matrix manipulation and interpolation. |
| 2018–Present | Early Forming Massive Stars Developed a controlled experiment using the the high performance coupled magnetohydrodynamic, radiation, and N-body software suite Torch to determine the effects of the formation time of very massive stars, an under-tested parameter space. |

CO-PI GRANTS

- ACCESS Accelerate (Grant No. PHY220160)
Awarded ~ 4.5 million computer hours. Jan. 2023

CONFERENCES AND TALKS

Contributed Talks

- Dissertation Talk: “Star Cluster Formation: The effects of early forming massive stars and building a bridge between Voronoi mesh and block-structured codes”
American Astronomical Society 241st Conference Jan. 2023
- “The Effects of Early Forming Massive Stars & A Novel Method for Inter-codebase Interpolation”
Clusters 2022, McMaster University 23 Aug. 2022
- “Quantifying the Effects of O-type Star Formation in Embedded Stellar Clusters”
Modest 21a Virtual Conference Jul. 2021
- “Using the MHD code FLASH to create a protoplanetary disk”
Physics Ph.D. Candidacy Exam, Drexel University 4 Jun. 2019

Poster Presentations

- “The Effects of Early Massive Star Formation: Gas Expulsion and Cluster Dynamics”
American Astronomical Society – 238th Conference Jun. 2021
- “The effects of O-type star formation in embedded stellar clusters.”
American Astronomical Society – 236th Conference Jun. 2020
- “Was the first observed hypervelocity globular cluster, HVGC-1, accelerated by a supermassive binary black hole?”
American Astronomical Society – 233rd Conference Jan. 2019

SOFTWARE DEVELOPED

Authored

- VorAMR A robust tool that utilizes **numpy** matrix manipulation, **scipy** nearest neighbor interpolation and the **AMUSE** software suite to convert output data from

any Voronoi mesh data structure to input data for adaptive block-based structures. *Publicly available code written in Python.* <https://bitbucket.org/torch-sf/voramr/src/main>

PythonOpenMPI

A generalizable utility for efficient task-based parallel programming using the `mpi4py` library. *Publicly available code written in Python.* <https://github.com/seanlabeau/PythonOpenMPI>

Contributed

Torch

A star cluster formation simulation software suite that couples the [AMUSE](#) framework with the magnetohydrodynamical code [FLASH](#). *Publicly available code written in Python.* <https://bitbucket.org/torch-sf/torch/src/main/src/>
